

PermaTrak

Precast Promenades ● Boardwalks ● Decks

1975
2025
CONSENT YEARS OF PROVIDING
INNOVATIVE SOLUTIONS

ALL CONCRETE!

Maintenance free
Suitable for extreme environments Attractive color & non-slip finish Supports light vehicles
Quick installation

Environmental Benefits
No metal fasteners to rust
Does not rot, twist, warp or splinter Cost-savings over hardwood
No toxic chemicals

PermaTrak Sundeck, Steps and Pier - Bahrain

PermaTrak boardwalk over wetlands - Australia

PermaTrak footbridge: Private Villa - Dubai

PermaTrak with viewing Decks – South Australia

PermaTrak Promenade Deck - Dubai Corniche

PermaTrak promenade construction – Palm Deira

PermaTrak®

Precast Promenades • Boardwalks • Decks

Components

PermaTrak® is an integrated modular system with concrete components that connect together.

Ball-pins enable flexible changes to grade and direction.

A tongue and groove arrangement allows treads to slide and interlock over the beams.

Tapered treads are used to change horizontal direction.

Color & Composition

PermaTrak can be customized to any color or texture including “timber-look”.

The color oxide in the concrete will not fade.

PermaTrak is made from high density concrete with additives to meet the most extreme environments.

Construction

PermaTrak can be installed quickly – up to 50 linear meters per day.

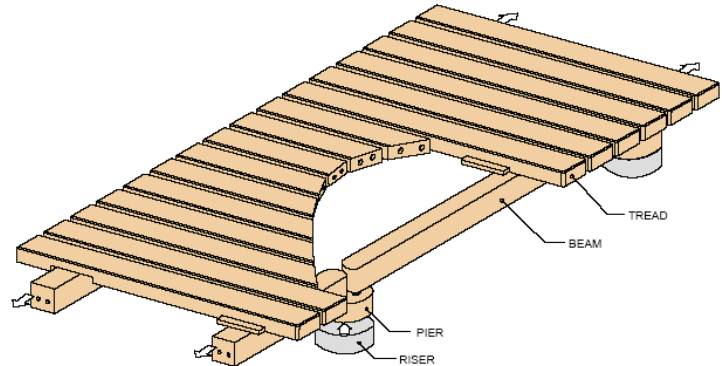

Only basic setting out skills with minimal equipment and tools are needed.

On-site power is not required, nor is in-situ cutting, sawing, nailing or bolting.

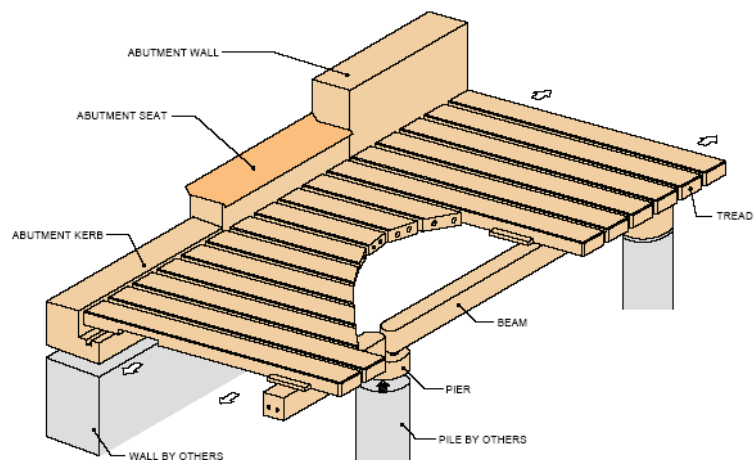

As PermaTrak can support light vehicles, span-over-span construction is possible.

PermaTrak can also be installed onto elevated in-situ footings (eg jetty piles).

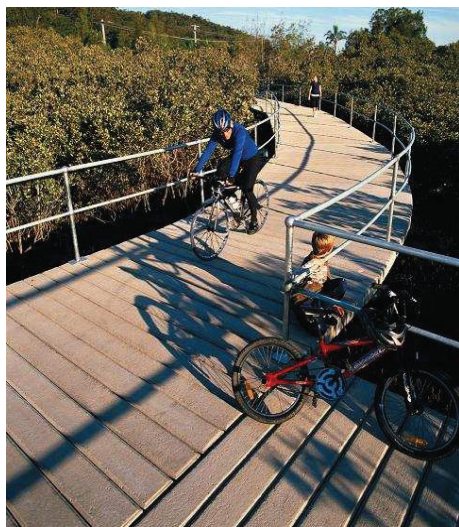

PermaTrak can be installed with minimal disruption to the environment.
